

# LiteHack Bridles

**LiteHack** bridles are just right for just the right purposes. They give your horse complete freedom to eat and drink without a bit in their mouth while endurance riding, trail riding, during other activities where having a bit in their mouth is less than desirable or if you just want to go bitless. They work well for lesson horses when beginning riders might not yet have soft hands on the reins and they work well for more experienced riders who have learned to communicate with your horse in multiple, more subtle ways. **LiteHack** bridles are a very soft, light and kind, hackamore type communication tool and come in a large variety of colors from a traditional looking brown to really fun, bright colors. They are made of Beta Biothane. The cheek pieces are very light aircraft aluminum. The other small rings and buckles on the bridles are stainless steel. So, **LiteHack** bridles are very easy to maintain. We use them for endurance riding and when we are done with a ride we can just slosh these bridles in a bucket of water to clean them and then hang them to dry. You can also get Beta Biothane reins to match your bridle. Just [Contact Us](#) if you would like to try a **LiteHack** bridle and see if it is the right bridle for your horse at the right times.
